**Energy Consumption Data Quality Assurance/Quality
Control Assessment Report for the
Month of January 2016**

Prepared for

**Utility & Energy Services
Division of Administration
Texas A&M University**

Acknowledgements

The TAMU energy consumption and data analysis report for the month of January 2016 is a collaborative effort from the personnel of the Utilities & Energy Services, Texas A&M University and the Energy Systems Laboratory, Texas A&M Engineering Experiment Station.

The authors of this report would like to thank Ms. Yasuko Sakurai, Mr. Alec Pointer at the Utilities & Energy Services for providing energy consumption data and valuable information related to the building operation. The lead of the energy analysis for TAMU project is Dr. Juan-Carlos Baltazar. Ms. Xiaoli Li and Mr. Yifu Sun, members of the energy analysis group in Energy Systems Laboratory contributed to this month report of consumption analysis for TAMU buildings. For information regarding to the TAMU Data Analysis project please contact the Energy Analysis Group Manager Dr. Juan-Carlos Baltazar.

Executive Summary

This report analyzes the energy use data collected from 559 meters in 187 buildings and complexes (approximately 17,041,770 GSF) on the campus of Texas A&M University in College Station, Texas. The report consists of five sections: 1) The summary of the monthly energy consumption per meter ID, 2) The quality control and assurance analysis of incorrect or incomplete energy use patterns, 3) Energy consumption time series plots, 4) Energy Balance plots, and 5) Energy Balance plots with filled-in consumption data. Section one contains the summary of monthly energy consumption for each of the TAMU buildings. Section two includes the reviews on each of those building energy use patterns that presented problems in the metered data. Section three and four are a collection of the plots generated for the energy use analysis, as reference to indicate and validate the quality of the metered energy data. The Section five includes the energy balance plots with filled-in energy data.

II-1 Meters with Missing Energy Consumption Data

During the month of January 2016, 99 meters in 63 buildings and complexes have missing daily data. The missing data have been filled in using consumption models based on the past data if available or using linear interpolation or some sort of average, and the monthly consumption has been estimated with the filled-in daily consumption. Table II-1 is the list of meters with missing data.

II-2 Meters with Estimated Consumption for Problematic Data

During the month of January 2016, 21 meters in 15 buildings have estimated daily consumption because the recorded consumption is found to be problematic or questionable. For each of these meters, alternative consumption has been estimated using the best possible method. Table II-2 lists these meters with indications of the days with estimated data. Detailed descriptions for individual cases follow.

Quantitative descriptions and comments

Both the CHW and HHW consumption Increased during 1/8/2016-1/12/2016, the CHW flow rate was a little higher and the HHW delta T Increased. The consumption was estimated by models. The energy balance is low for years, and the cross-point temperature is 50°F in this month.

CHW	002519	1/8/2016 – 1/12/2016	Delta T	Decreased
HHW	002515	11/5/2015 – ongoing	Delta T	Negative

Quantitative descriptions and comments

The CHW consumption suddenly dropped about 80 Btu/day/ft² during 1/8/2016-1/12/2016, since the delta T turned to be smaller. The HHW consumption was very low (nearly zero) since 8/12/2015, due to either low flow rate or faulty delta T. Since 11/5/2015, the supply temperature was lower than the return temperature most time. The consumption was estimated by models.

HHW	003862	12/27/2015 – 1/6/2016	Delta T	Decreased

Quantitative descriptions and comments

Both the CHW and HHW consumption decreased during 12/27/2015 – 1/6/2016. The CHW supply and return temperatures dropped to around 10°F lead to nearly zero delta T. The HHW supply and return temperatures decreased to around 80°F and the flow rate decreased about 20 gpm. The consumption was estimated by models.

HHW	003944	8/22/2015 - ongoing	Delta-T	Decreased and small

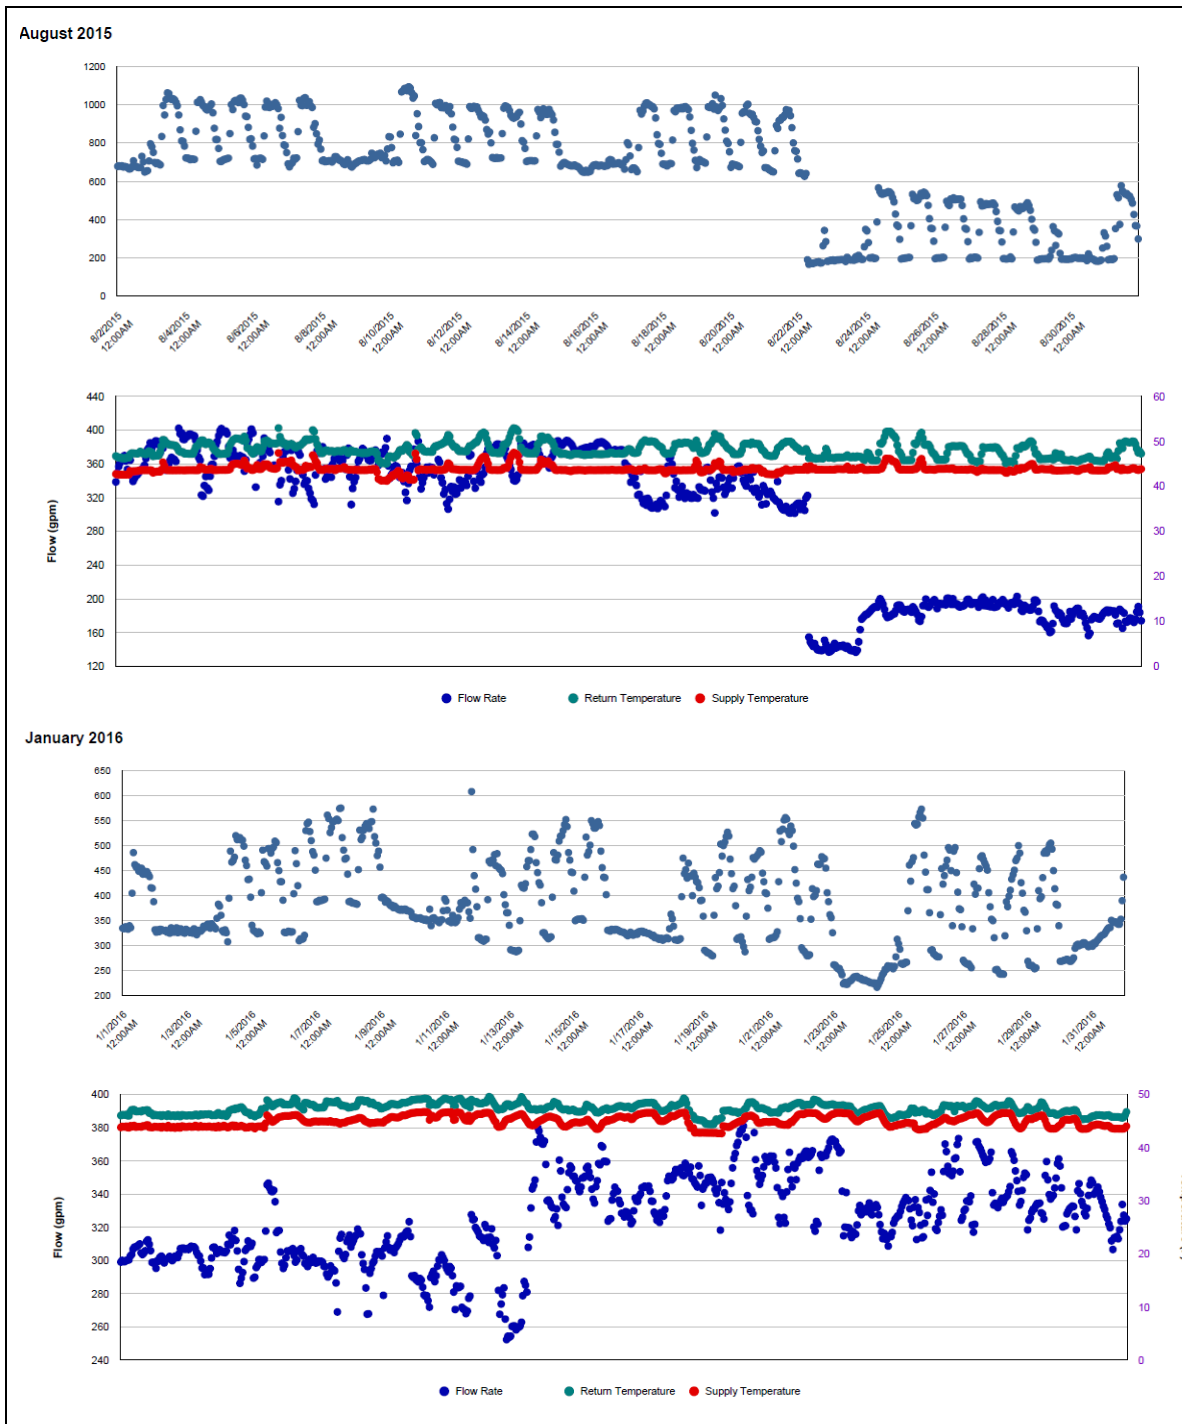

Quantitative descriptions and comments

The return temperature for HHW meter increased and the delta-T became very small since 8/22/2015. At the same time, the flow rate decreased around 50%. As a result, the HHW consumption decreased largely (~80%). The CHW consumption also decreased by approximately 50% after 8/22/2015 caused by a decrease in flow rate. The flow rate increased back on 9/19/2015, but the consumption level for current month is 100 Btu/day/ft² lower than that before 8/22/2015. The consumption was estimated by models based on the data during 8/1/2014 - 7/31/2015. We would like to know if this building has renovation recently.

Quantitative descriptions and comments

After 7/27/2015, both supply and return temperature increased without a change of flow rate and delta-T was low, 2 - 3°F. The water temperatures decreased back at the end of July 2015, but the delta-T was still low. As a result, the consumption decreased by 50 - 100 Btu/day/ft². The consumption was estimated by a model.

Quantitative descriptions and comments

CHW consumption increased by approximately 100% since 1/14/2016 due to a sudden increase of return temperature. The return temperature increased from ~48°F to ~55°F.

The HHW consumption for this building doesn't seem to be used too much during summer period. Usually the consumption increased after October. But the HHW consumption for this month still maintained at low consumption level. As a result, the energy balance load for current month is low with the cross-point temperature less than 40°F. The consumption for entire month was estimated by models.

Quantitative descriptions and comments

The electricity consumption gradually decreased by approximately 120 Btu/day/ft² (~50%) since July 2015. It seemed that the building peak demand decreased during this period. The consumption level increased back after 10/3/2015. But it increased largely (50 – 200 Btu/day/ft²) after 11/13/2015. Comments

ELE meter (ID# 005274) is serve for TX School of Rural Public Health B and ELE meter (ID# 005275) is for TX School of Rural Public Health C.

The ELE consumption levels for these two meters have a sudden change on 8/14/2015. The consumption level for meterID 005274 increased by approximate 80 kWh/h (~ 100%) and the consumption level for meter ID 005275 decreased by around 80 kWh/h (~50%).

It was observed that the cumulative reading for these two meters switched on 8/14/2015 12:00 AM. It is suggested to investigate these two meters.

II-3 Meters with Significant Issues in Energy Consumption Data

In this section, significant issues in the data behavior are described. On the contrary to the section II–2, alternative consumption is not estimated for some reasons: presence of continuous problems since the beginning of the data acquisition, unbalanced energy uses in the past data, changes in the consumption patterns without evidence of data problems, etc. Table II–3 gives a list of meters included in this section.

Rudder Hall (TAMU Bldg #291)

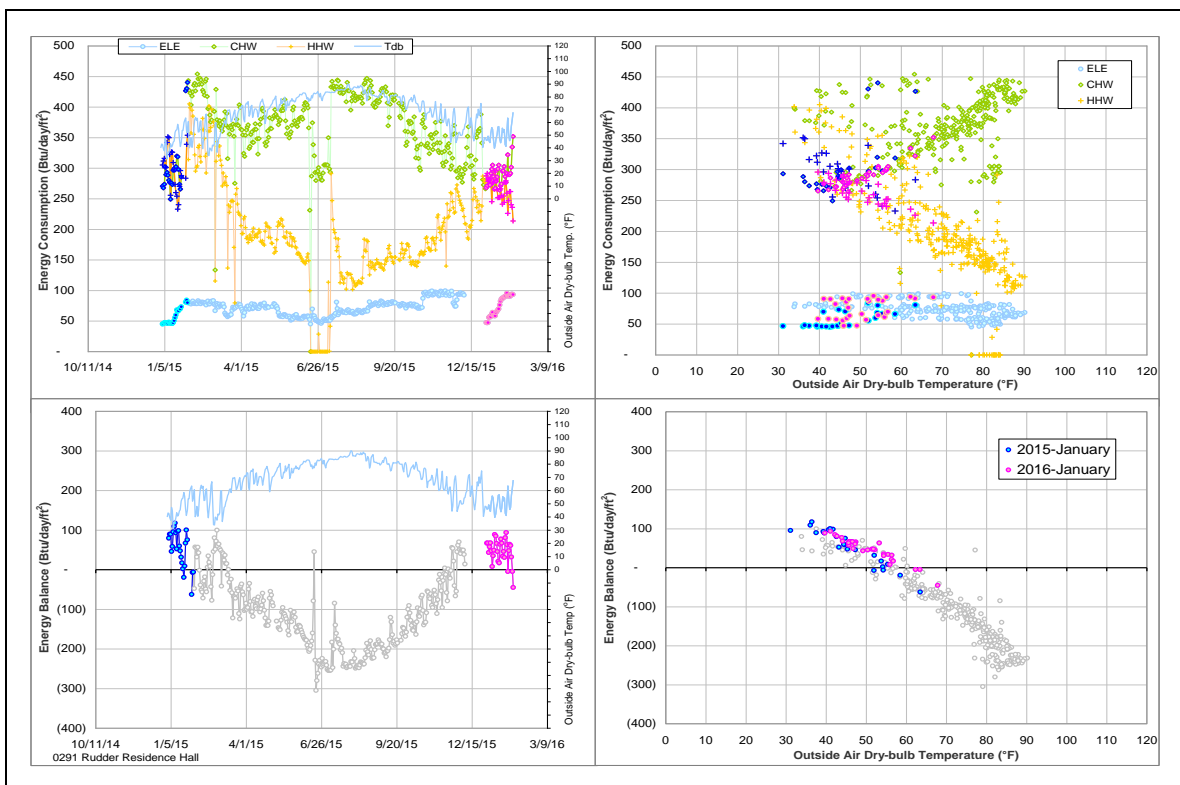

Detected issues in the energy balance and/or the consumption data

Data Type	Description of data behaviors	Period
Energy Balance	The energy balance level is low. The cross-point temperature is around 55°F.	For several years

Comments

This building has a low level of energy balance load with the cross-point temperature below 55°F. The low E_{BL} level suggests imbalance of metered energy use in the building, but we are not able to determine the cause.

Appelt Residence Hall (TAMU Bldg #293)

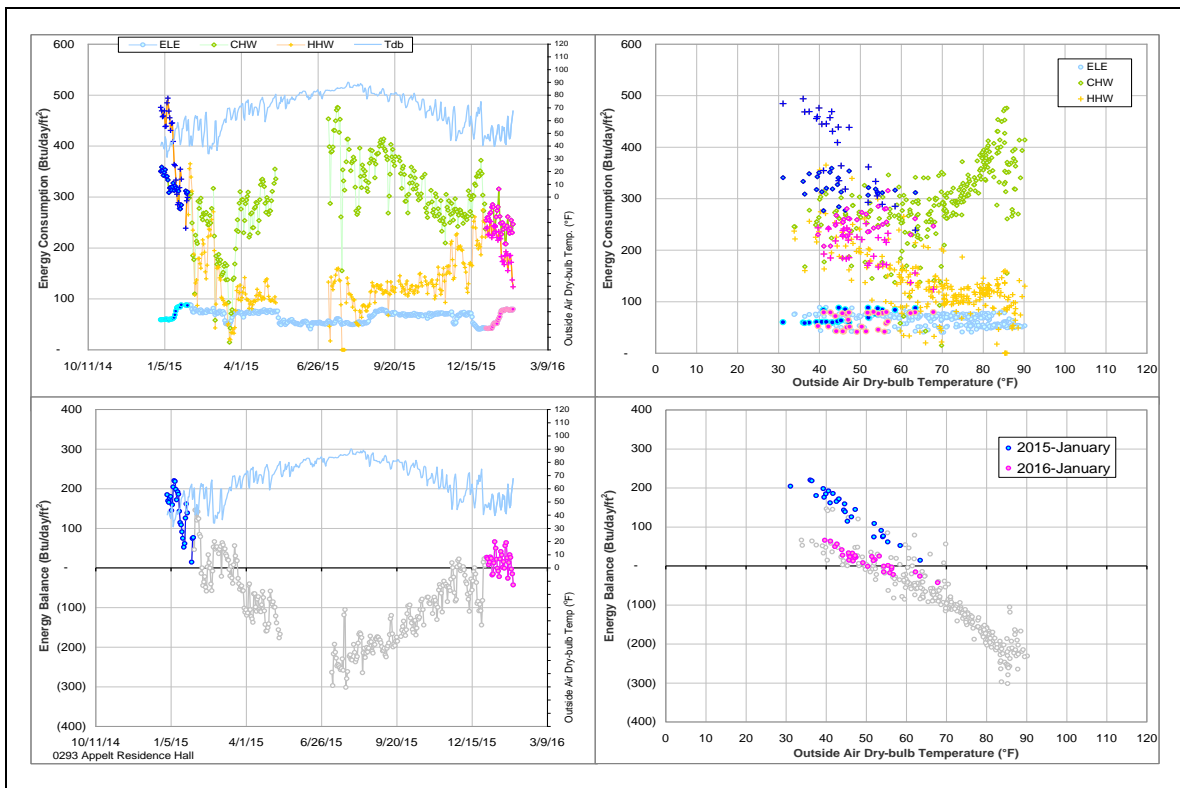

Detected issues in the energy balance and/or the consumption data

Data Type	Description of data behaviors	Period
CHW	The consumption level suddenly decreased.	Since December 2014
HHW	The consumption gradually decreased.	Since January 2015
Energy Balance	The energy balance decreased and the cross-point temperature is around 55°F.	Since January 2015

Comments

Both the CHW and HHW consumption levels have decreased, respectively. As a result, the energy balance load was low with the cross-point temperature around 55°F. The low E_{BL} level suggests imbalance of metered energy use in the building, but we are not able to determine the cause.

Bright Building (TAMU Bldg #353)

Detected issues in the energy balance and/or the consumption data

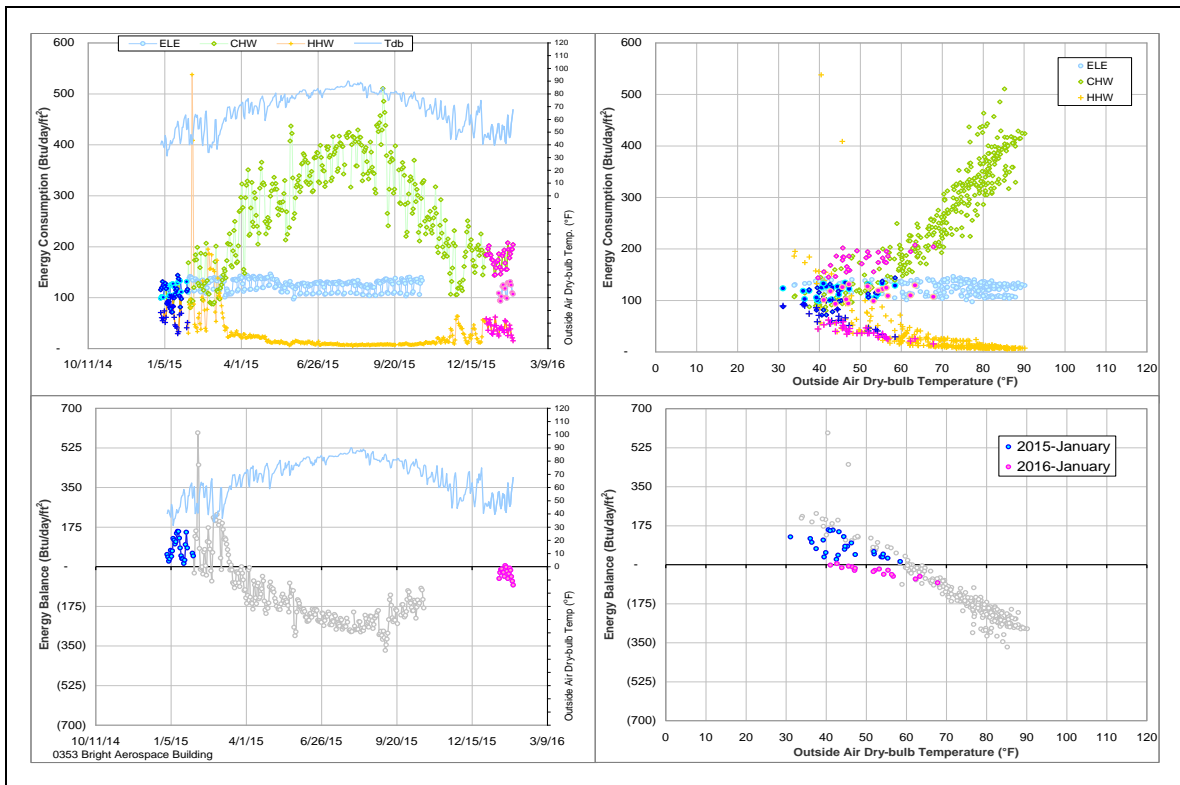

Data Type	Description of data behaviors	Period
Energy Balance	The energy balance level is low.	For several years

Comments

The energy balance load (E_{BL}) of this building has been low and the cross-point temperature was around 50°F for years. The electricity use level was in a typical range for office and classroom buildings on campus. Therefore, either CHW or HHW consumption might be causing the unbalanced energy balance in the building.

The CHW consumption gradually decreased since October 2014. It made the energy balance shifted to more reasonable range and the temperature at $E_{BL} = 0$ was 60°F. In this month, The CHW increased, and the energy balance further decreased with the cross point temperature lower than 50°F.

Underwood Hall (TAMU BLDG # 394)

Detected issues in the energy balance and/or the consumption data

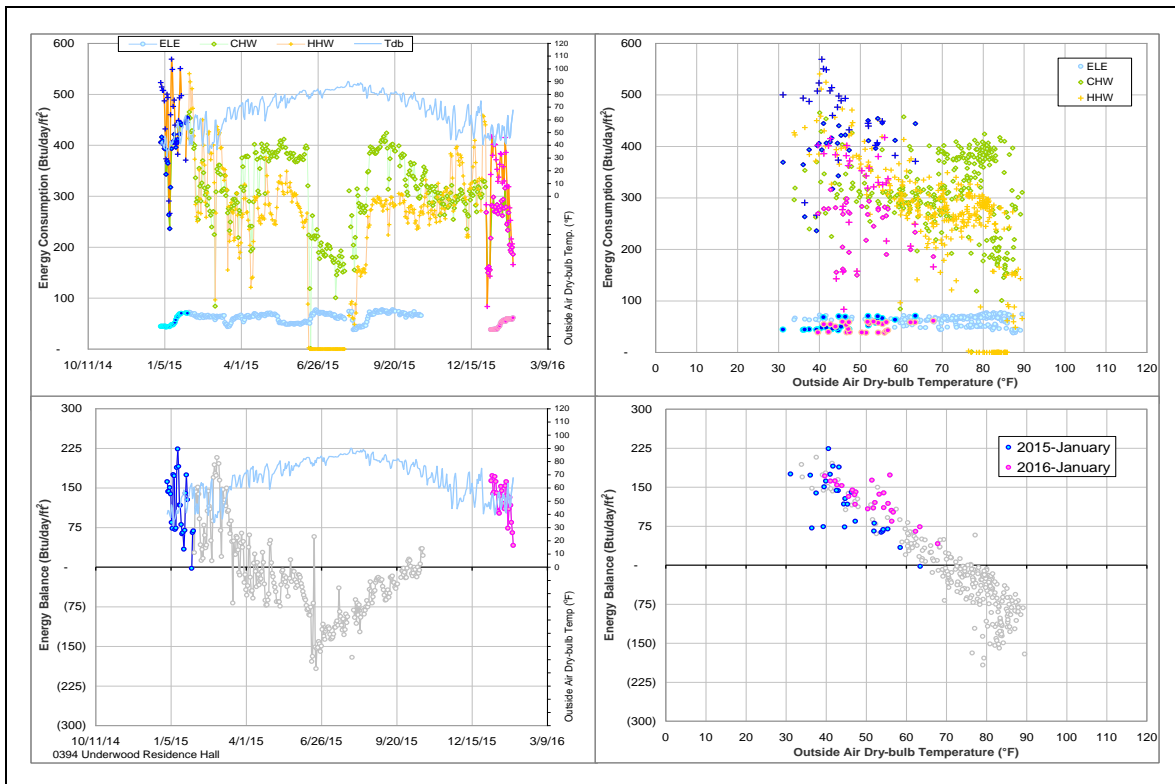

Data Type	Description of data behaviors	Period
CHW and HHW	The consumption varied frequently.	Since June 2015
CHW	The consumption pattern was very scattering and no clear temperature dependence was observed.	For one year

Comments

Both CHW and HHW consumption increased or decreased at the same time since June 2015. As we know, VFDs have been installed for HHW and CHW in December 2014 and June 2015, respectively.

The CHW consumption pattern was very scattering and no clear temperature dependence was observed for last year. It is suggested to investigate this meter.

Rudder Theatre Complex (TAMU BLDG # 446)

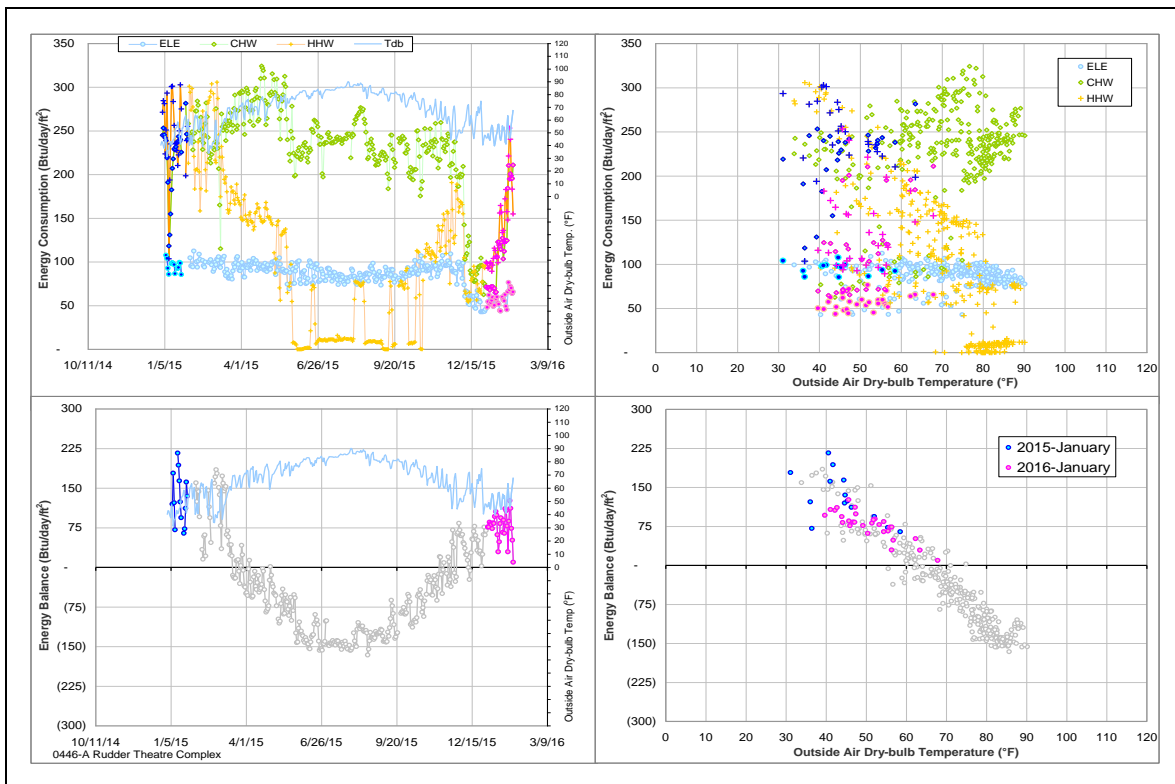

Detected issues in the energy balance and/or the consumption data

Data Type	Description of data behaviors	Period
ELE, CHW and HHW	The consumption level suddenly decreased.	Since 12/7/2015

Comments

The ELE (Meter ID: 002977), CHW (Meter ID: 004297) and HHW (Meter ID: 004309) consumption suddenly decreased by 50, 150 and 100 Btu/day/ft², respectively, since 12/7/2015. The decrease of the CHW consumption was caused by the decrease of the return temperature, and the drop of the HHW use was led by the smaller delta T. In the middle of January 2016, the CHW and HHW consumption gradually increased. However, the energy balance has no significant change and the cross-point temperature is still in the reasonable range (around 70°F). It is recommended to check the system operation of this building.

MSC (TAMU Bldg # 454)

Detected issues in the energy balance and/or the consumption data

Data Type	Meter ID	Description of data behaviors	Period
ELE	007420	The consumption data is missing.	3/1/2015 – ongoing

Comments

There are three ELE meters for this building. The ELE consumption for Meter #007420 counts for less than 5% of total ELE use. The ELE (Meter ID: 007420) consumption data is missing since 3/1/2015. The energy pattern for this meter was always scattered for years, and the consumption decreased to around one fourth during 11/1/2014 through 2/28/2015. The missing data was estimated by a temporary model based on the data during 2/1/2014 – 9/30/2014.

For the month of September 2015, a counter reading of this ELE meter was given, but this number was very high (around 10 times of the consumption level before March 2015).

Psychology Building (TAMU Bldg #463)

Detected issues in the energy balance and/or the consumption data

Data Type	Description of data behaviors	Period
Energy Balance	The pattern scatters and the level is low.	For several years after ESCO implementation in 2011
CHW	The consumption pattern versus ambient temperature scatters.	

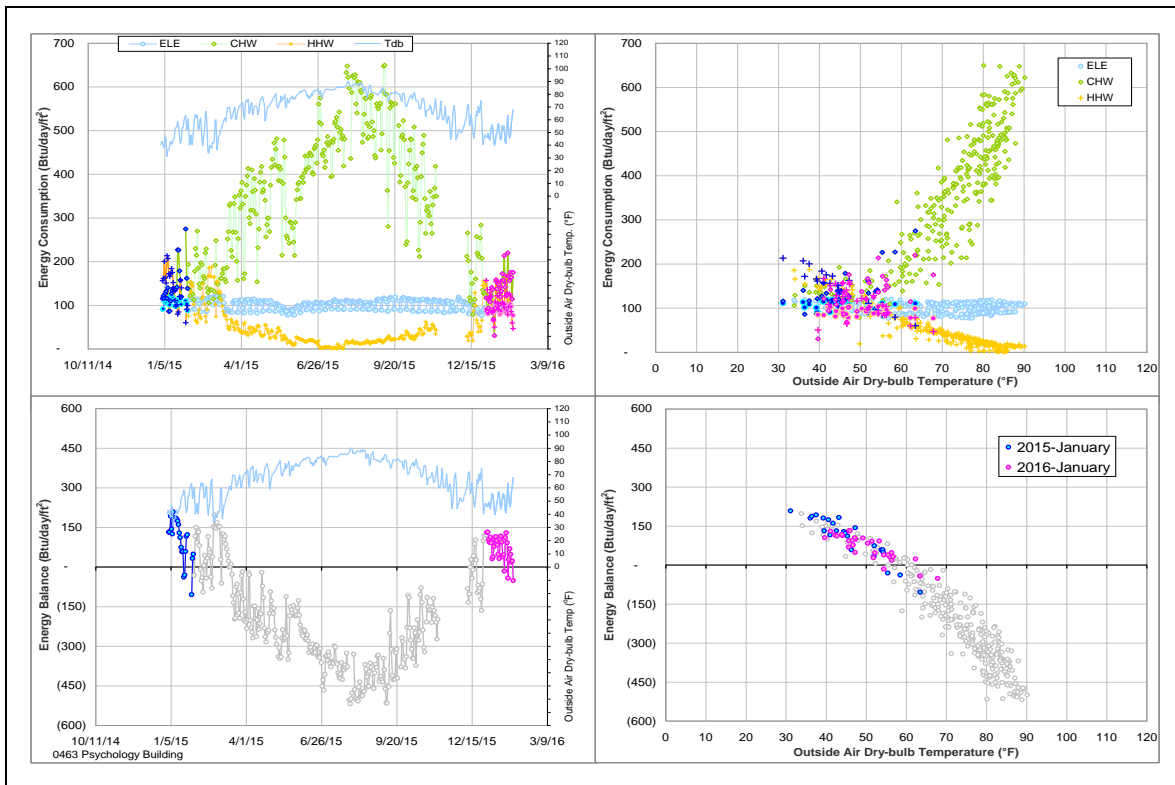

Changes in sensor readings related to the detected issues

Energy Type	Meter ID	Period	Type	Description
CHW	002941	11/29/2012–ongoing	Delta T	Large for office building

Quantitative descriptions and comments

The CHW consumption pattern versus ambient temperature started to scatter after ESCO implementation. The CHW consumption level is high, because the CHW temperature differential is around 20°F that is high for an office building with conventional HVAC systems. The cross-point temperature of the energy balance is 50 - 60°F. The building had energy efficiency improvements by ESCO during the period of 5/9/2011–8/19/2011.

Explanatory Figure: 13 months energy balance plot with original data

Biological Sciences Building – East (TAMU Bldg # 467)

Detected issues in the energy balance and/or the consumption data

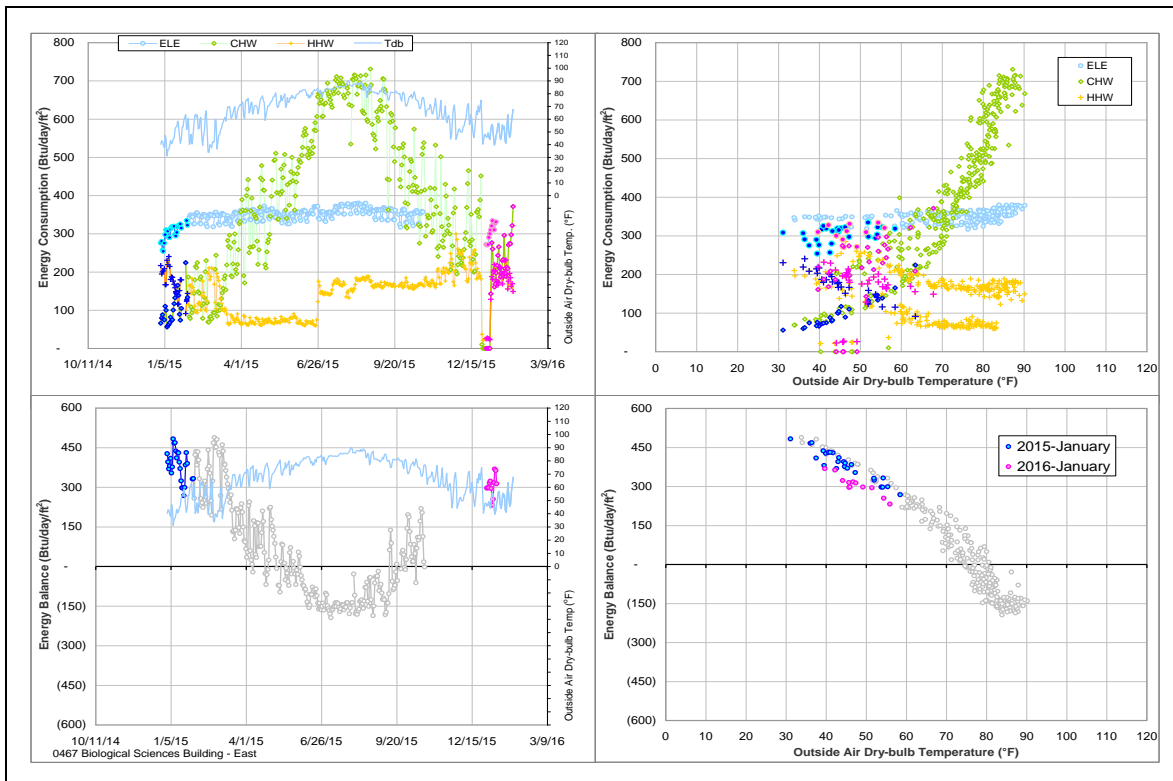

Data Type	Description of data behaviors	Period
ELE	The consumption level may be high.	1/2/2013–ongoing
HHW	The consumption level suddenly increased.	6/26/2015–ongoing
CHW	The consumption was higher than the same period of last year.	Since November 2015

Comments

The ELE consumption suddenly increased after 1/2/2013 by approximately 100 Btu/day/ft². There was a power outage in the building right before this increase. The CHW and HHW consumption levels did not change. The increased ELE usage level was in the range 290 - 390 Btu/day/ft² for the last year, which was higher than those for other buildings with similar functionality. For example, the ELE use range in the adjacent Biological Sciences Building – West (Bldg 449) was 190 –250 Btu/day/ft² during the same time period. These buildings have similar CHW and HHW consumption levels. The energy balance load after the ELE increase was higher than expected range by approximately 120 Btu/day/ft². The increase of the ELE use in Biological Sciences Building – East after 1/2/2013 was questionable and this meter needs attention.

The HHW consumption suddenly increased about 100 Btu/day/ft² since 6/26/2015 due to an increase in the delta-T. The CHW consumption since the month of November 2015 was about 100 Btu/day/ft² higher than the same period of last year.

Civil Engineering Building (TAMU Bldg # 492)

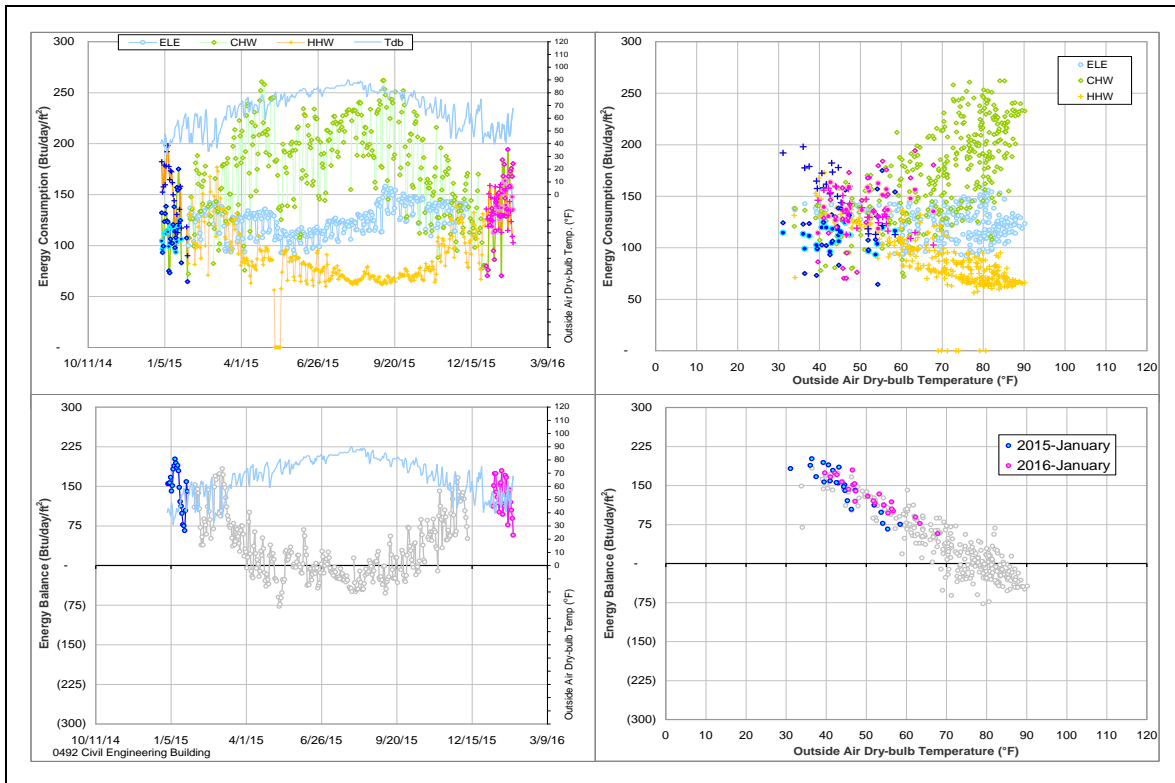

Detected issues in the energy balance and/or the consumption data

Data Type	Description of data behaviors	Period
Energy Balance	The cross-point temperature is high.	Since May 2015
CHW	The consumption level Decreased.	Since May 2015

Comments

The CHW consumption decreased since May 2015 and the energy balance turned to by high (cross-point temperature was around 80°F).

Utilities & Energy Services Central Office (TAMU Bldg #496)

Detected issues in the energy balance and/or the consumption data

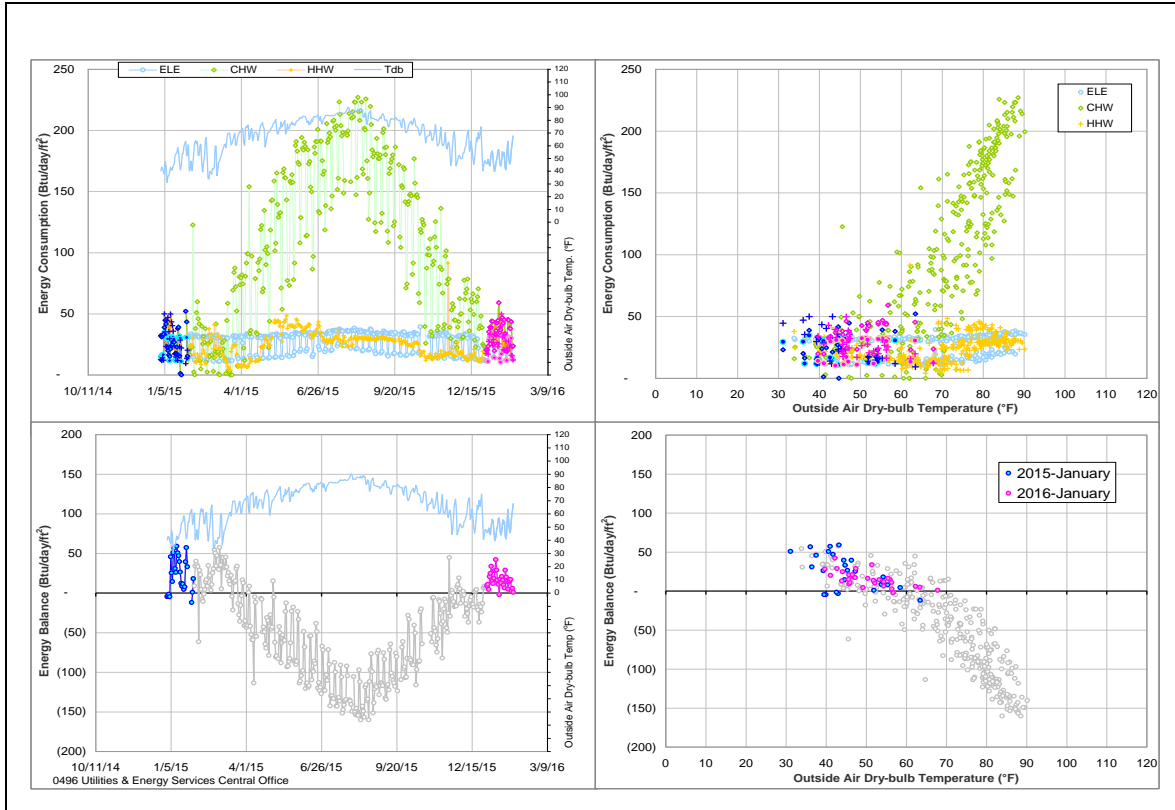

Data Type	Description of data behaviors	Period
ELE, CHW, and HHW	The energy use per unit floor area was low compared to other buildings.	Since the data became available on 7/1/2012

Quantitative descriptions and comments

The peak electricity use density was around 0.65 W/ft² which was small compared to that in other office buildings on the campus. The delta T for HHW seemed to be small for years. The CHW and HHW consumption per the unit floor area also seem to be low. It is possible that the GSF we have (46,110 ft²) includes substantial unoccupied space.

The energy balance was scattered due to the consumption level changes for CHW and HHW, the cross-point temperature of the energy balance was ranged around 50 to 70°F.

Engineering Innovation Center (TAMU Bldg # 499)

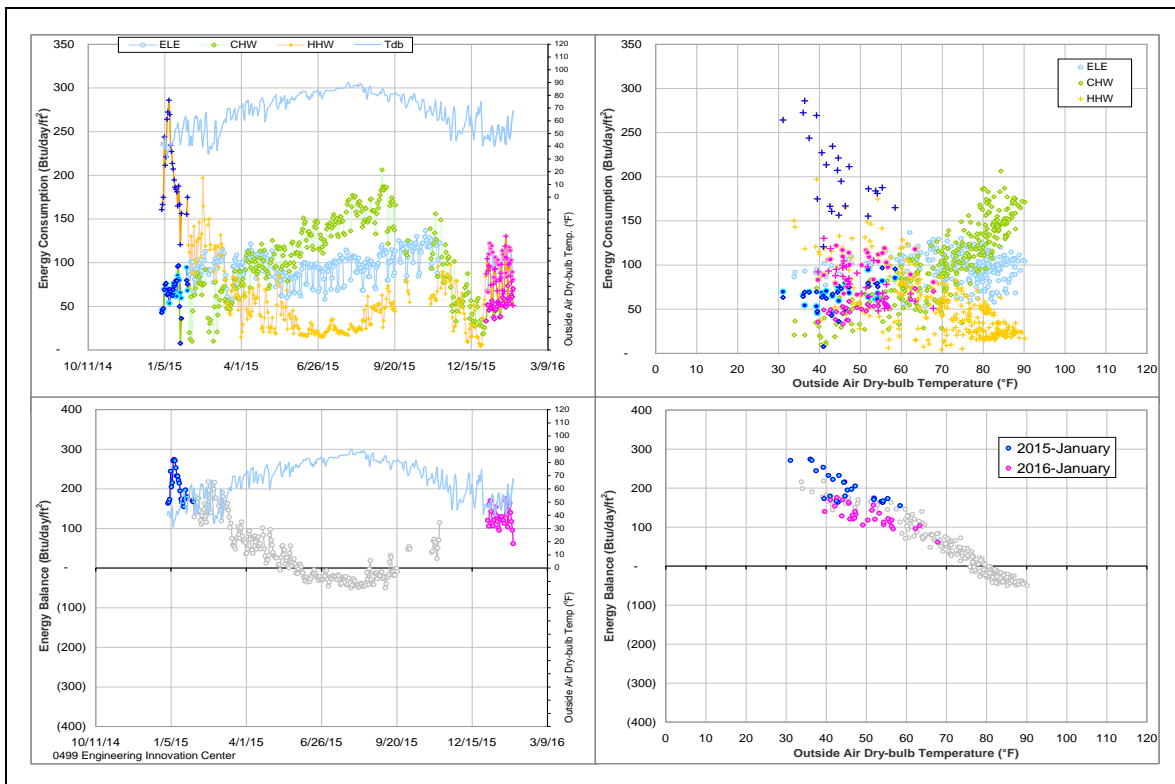

Detected issues in the energy balance and/or the consumption data

Data Type	Description of data behaviors	Period
Energy Balance	The cross-point temperature is high.	For years
CHW	The consumption level is low compared to the ELE and HHW consumption.	For years
HHW	The consumption was lower than the same period of last year.	Since December 2015

Comments

The cross-point temperature of the energy balance is around 80°F. The CHW consumption is relatively low and its delta T is always small. The HHW consumption since December 2015 is much lower than the same month of last year (about 100 Btu/day/ft² lower).

Explanatory Figure: 13 months energy balance plot with original data

Nagle Hall (TAMU Bldg #506)

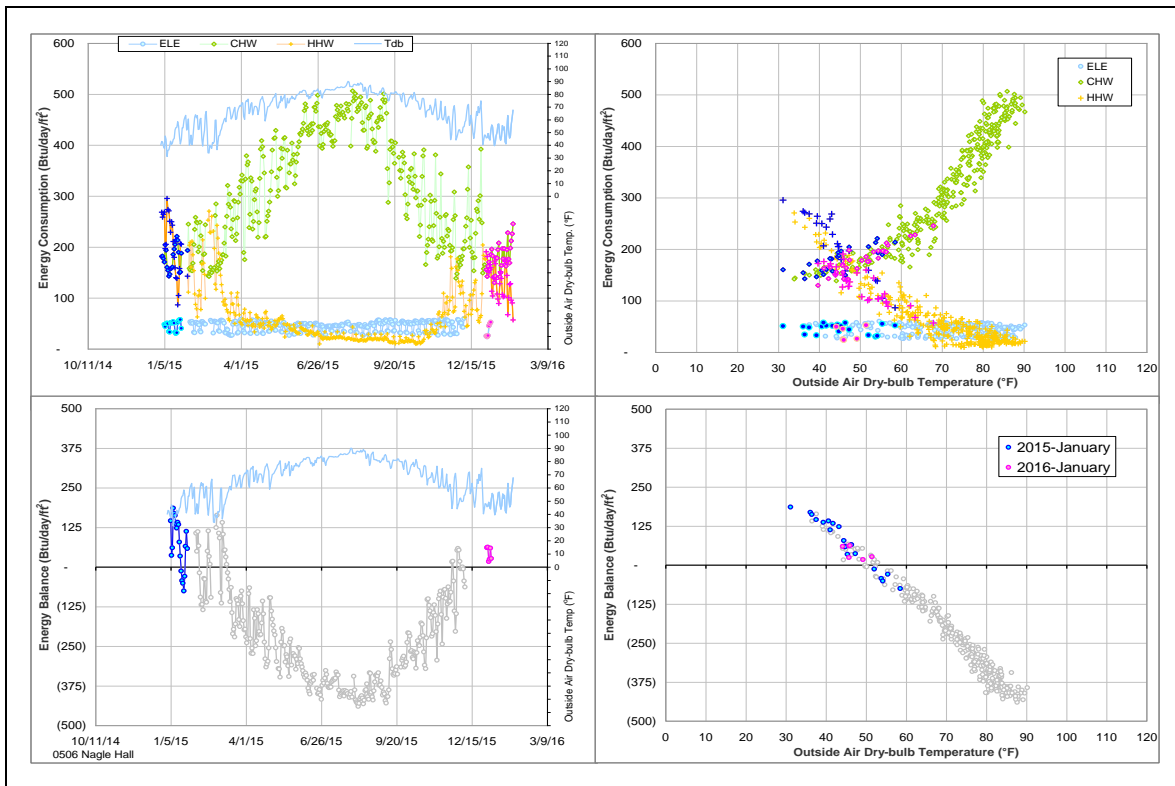

Detected issues in the energy balance and/or the consumption data

Data Type	Description of data behaviors	Period
Energy Balance	The level was low and the cross-point temperature was around 50°F.	The cross-point temperature has always been low.
ELE	The consumption per unit floor area was smaller than those for other office buildings.	The level was always low and gradually decreased over the past 4 years.

Comments

The ELE consumption was about 100 Btu/day/ft² lower than the levels in typical office buildings on campus, and this might be a metering error or this meter might not cover the whole building.

Veterinary Teaching Hospital and Veterinary Medicine Administration (TAMU Bldg #508)

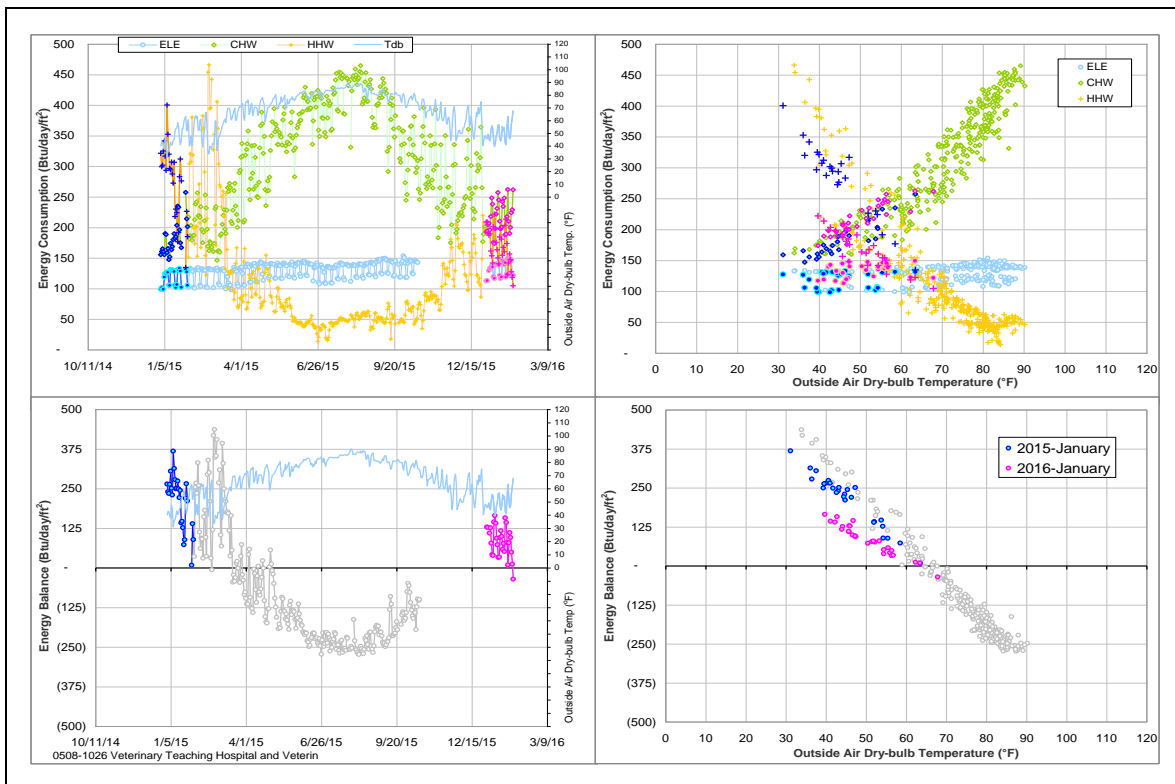

Detected issues in the energy balance and/or the consumption data

Data Type	Description of data behaviors	Period
Energy Balance	The energy balance load decreased.	Since last winter
HHW	The consumption decreased gradually.	Since last winter

Comments

The HHW consumption decreased gradually and the consumption in current month was 50 - 100 Btu/day/ft² lower than that of same month last year. However, there is no conclusive meter issue for this meter.

Explanatory Figure: 13 months energy balance plot with original data

Heep Laboratory Building (TAMU Bldg #511)

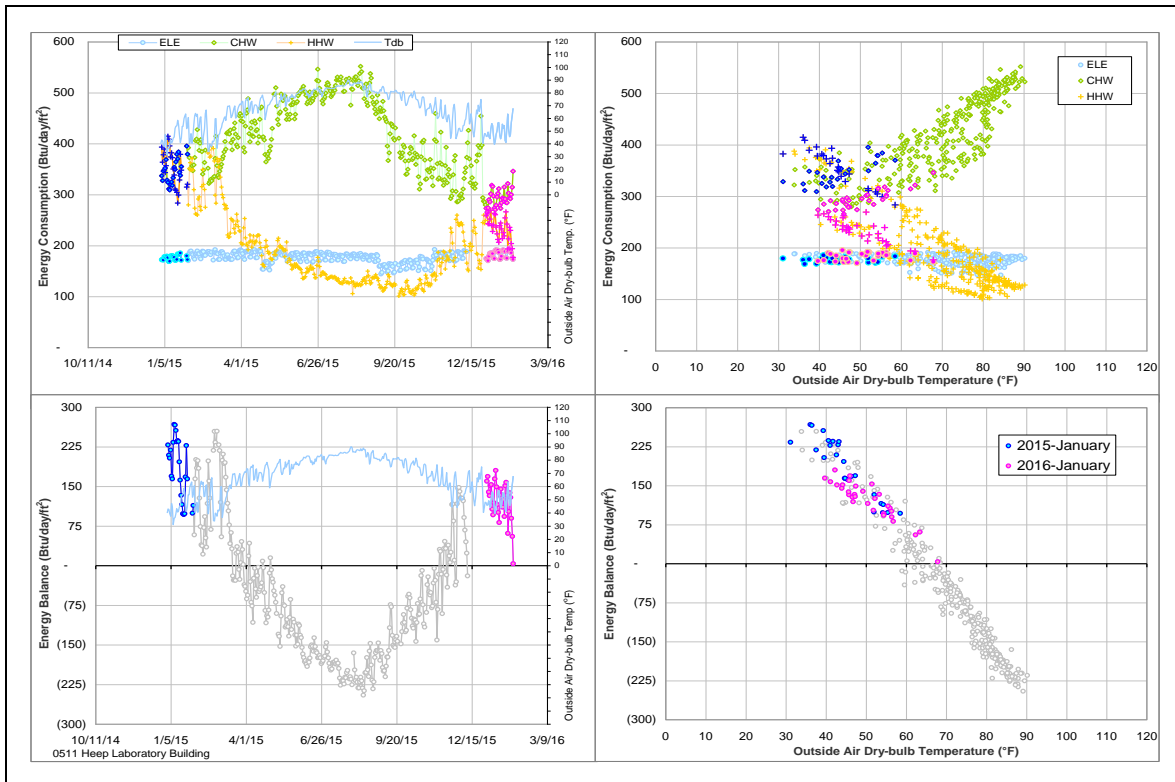

Detected issues in the energy balance and/or the consumption data

Data Type	Description of data behaviors	Period
CHW and HHW	Energy consumption levels decreased.	Since September 2015

Comments

All energy consumption levels decreased around 20 - 80 Btu/day/ft² since September 2015. The ELE consumption increased gradually and reached previous level in November 2015. There is no conclusive metering issue and energy balance maintained same pattern. This building had energy efficiency improvements by ESCO this year. It could be the reason to cause these changes.

HHW 006053	The sub-meter's (006053) flow rate for one building sometimes is higher than the total meter (004170) for two buildings.	For several years

Comments

The HHW meter ID 006053 is a sub-meter of the meter ID 004170 which meters the total energy use in the buildings #508 and 1026. It is questionable that the flow rate of the sub-meter exceeds the flow rate of the main meter. We would like to know the HHW distribution route for the two buildings and the locations of the sensors.

ESL has not received the consumption data for the HHW meter since 10/21/2012.

Biological Control Facility (TAMU Bldg# 1146)

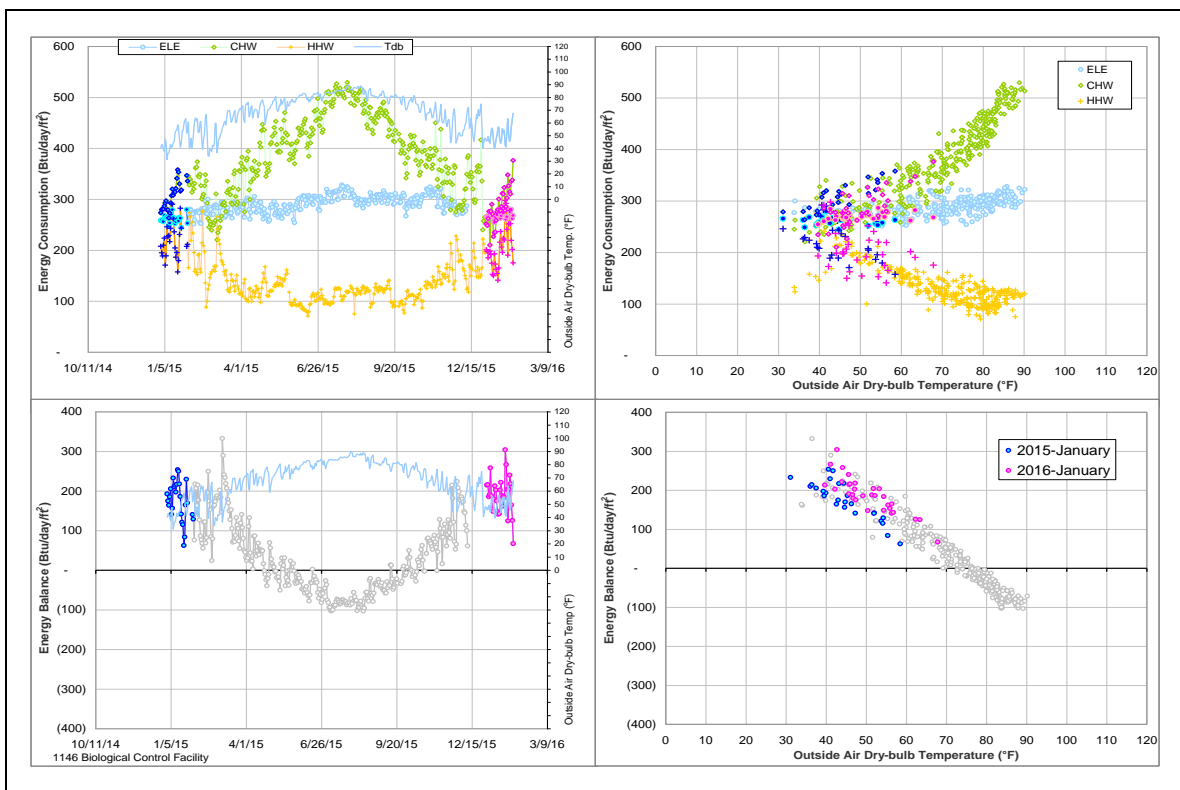

Detected issues in the energy balance and/or the consumption data

Data Type	Description of data behaviors	Period
Energy Balance	The cross-point temperature is slightly high, ~75°F.	12/28/2014-ongoing
HHW	The consumption level increased 30-50 Btu/day/ft ² .	12/28/2014-ongoing
ELE	The consumption increased gradually.	For last year

Comments

The electricity consumption increased gradually. The consumption level in current month is 20% higher than same month of last year. The HHW consumption level increased 20 – 50 Btu/day/ft² since 12/28/2014. Both flow rate and delta-T had slight change. The CHW consumption level doesn't have obvious change. As a result, the energy balance pattern changed and the cross-point temperature became slightly high, approximately 75°F.

CHW	The consumption level might be low compared to the ELE and HHW use level.	Since the data became available on 7/1/2012.

Comments

The electricity is not available till 7/1/2014. CHW consumption level might be low compared to the ELE and HHW use level. But the CHW consumption level has been stable since the data became available on 7/1/2012. More information might be needed to help identify which type energy causes the high cross-point temperature.

Detected issues in the energy balance and/or the consumption data

Data Type	Description of data behaviors	Period
ELE	The consumption is low for a laboratory building.	Since January 2010 when the meter was added to this report

Comments

The whole building hourly electricity use is in the range 130 kWh to 180 kWh (1.13 W/ft^2 to 1.57 W/ft^2), which is low for a veterinary laboratory building on the campus. This seems to be the reason for the low level of the energy balance load. The temperature-axis intercept of the energy balance is around 62°F .

Kleberg Center (TAMU Bldg #1501)

Detected issues in the energy balance and/or the consumption data

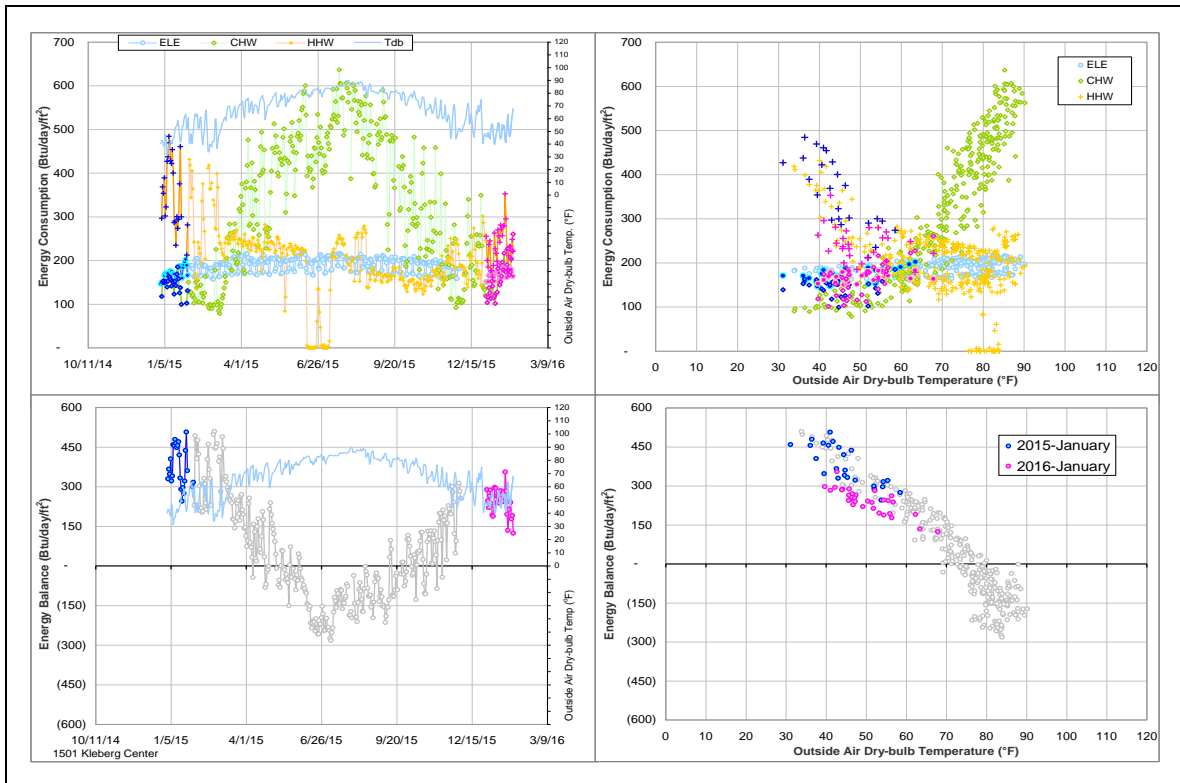

Data Type	Description of data behaviors	Period
CHW	The return temperatures is high. Delta-T is bigger than that for similar buildings in campus.	Since we started to analysis this building in 2006.

Comments

The return temperature for CHW meter was high, about 60 - 70°F for years. The return temperature increased further on 11/13/2014 and it reached 80°F sometimes. Delta-T for this building (25 - 35°F) is much bigger than that for similar buildings in campus. It is suggested to investigate the temperature sensor for CHW meter.

The ESCO period for this building is 5/1/2011-1/1/2012. The CHW consumption level has been stable for over three years after ESCO period.

CHW	The consumption level decreased largely. The scattering data was observed.	October 2013 - ongoing
	The consumption level increased. The scattering data was observed.	5/28/2015 - ongoing

Comments

The CHW consumption level decreased from 800 Btu/day/ft² to 100 Btu/day/ft² since October 2013 mainly caused by a decrease in the flow rate. The consumption pattern was very scattering and the cross-point temperature is high, 75-85°F, after this decrease. The CHW consumption increased at the end of May 2015 which causing the cross-point shift to more reasonable range. We need more data to verify this trend. But the consumption pattern is still very scattering.

ENERGY SYSTEMS LABORATORY
TEXAS A&M ENGINEERING EXPERIMENT STATION

Project: TAMU: Energy Analysis*

Report: Energy Consumption Data Quality Assurance/Quality Control
Assessment Report for the Month of January 2016

Prepared for:

Utility & Energy Services
Division of Administration
Texas A&M University

Authors: Yifu Sun, Xiaoli Li
Dr. Juan-Carlos Baltazar, and Dr. David Claridge

Date: February 2016
